STATE OF MONTANA

AERONAUTICS DIVISION
P.O. BOX 5178
HELENA, MONTANA 59604
(406) 444-2506

1 JANUARY 1985

TO MONTANA PILOTS:

THANK YOU FOR YOUR PURCHASE OF OUR 1985 AIRPORT DIRECTORY.
WE HOPE THAT IT WILL ASSIST YOU IN YOUR FLIGHTS THROUGHOUT
THE STATE OF MONTANA.

THIS DIRECTORY REFLECTS THE MOST CURRENT INFORMATION
KNOWN TO US. WE DEPEND UPON YOUR HELP TO KEEP IT AS
ACCURATE AND UP TO DATE AS POSSIBLE. IN YOUR TRAVELS
THROUGHOUT THE STATE, IF YOU NOTICE ANY CHANGES OR CORRECT-
IONS, PLEASE WRITE OR CALL OUR OFFICE AT 444-2506. YOUR
COMMENTS AND SUGGESTIONS ARE ALWAYS WELCOME ON NEW WAYS TO
IMPROVE OUR DIRECTORY.

ALTHOUGH 80 OCTANE FUEL IS LISTED AS AVAILABLE AT MANY
MONTANA AIRPORTS, ACTUAL AVAILABILITY MAY BE INTERMITTENT.
SOME FIXED BASE OPERATORS ARE NOW OFFERING AUTOMOBILE
GASOLINE TO AIRCRAFT HOLDING THE APPROPRIATE STC. WE
SUGGEST THAT YOU CONTACT YOUR DESTINATION FBO PRIOR TO
DEPARTURE TO INSURE AVAILABILITY OF YOUR REQUIRED FUEL.

BEST REGARDS

Michael D. Ferguson

This airport directory has been compiled from information submitted by airport owners, flight operators and interested pilots. Every effort has been made to provide a complete and accurate directory. Because airport conditions are constantly changing, the Montana Aeronautics Division assumes no responsibility for any action taken by a pilot on the basis of information contained herein.

Pilots are reminded it is their responsibility to check FAA Notices to Airmen for current information as well as making a visual inspection of the airport before using.

LIGHT SIGNAL PROCEDURES FOR AIRPORT TRAFFIC CONTROL

Signals from a portable traffic control light shall mean the following:

Color and Type of Signal	On the Ground	In Flight
STEADY GREEN	Cleared for take-off	Cleared to land
FLASHING GREEN	Cleared to Taxi	Return for landing (to be followed by steady green at proper time)
STEADY RED	Stop	Give way to other aircraft and continue circling
FLASHING RED	Taxi clear of landing area (runway) in use	Airport unsafe—do not land
FLASHING WHITE	Return to starting point on airport

ALTERNATING
RED & GREEN

General Warning Signal —
Exercise Extreme Caution.

AERONAUTICAL CHART SYMBOLS

The Montana Aeronautics Division is attempting to standardize symbols used on aeronautical charts. You, as a pilot, realize the difference encountered from state to state and even in the world aeronautical charts to the sectional charts. We have decided to use the new symbols at the top of each directory page to help familiarize you with the system which is being used on the Montana aeronautical chart. The National Association of State Aviation Officials agreed on symbol standardization and offered the following as the solution to an old problem. We hope a standard system will be adopted nationwide by all government agencies. We welcome your comments on this matter.

		3684-----Elevation in Feet L-----Lighting 41-----Length of Longest Runway in U-----Hundreds of Feet Unicom U1...122.8 for landing areas (except heliports) without an ATC tower or FSS U2...123.0 for landing areas (except heliports) with an ATC tower or FSS U3...123.05 for heliports ★-----Airport Beacon	Public Airport 3684 L 41 U
	_____	Operator or Service Available (Aviation gas minimum)	
	_____	Military Field	
	_____	Paved (With runway pattern)	
	_____	Restricted PRIVATELY OWNED (Not for public use).... Possible unreported hazards. User assumes all risk.	
	_____	Warning AIRPORT..... (Not built to normal dimen- sional standards. Requires special tech- niques and procedures in use. NOT INTENDED FOR FULL PUBLIC ACCESS. Owner requests users seek pre-arrangement with full and responsible understanding of the safety factors involved).	
	_____	Abandoned	
	_____	Abandoned and Prohibited	
	_____	Heliport	
	_____	Heliport (Hospital Emergency Only)	

EMERGENCY SIGNALS -- Ground to Air

 NEED MEDICAL ASSISTANCE - USED ONLY WHEN LIFE IS AT STAKE	 ALL OK - DO NOT WAIT	 CAN PROCEED SHORTLY - WAIT IF PRACTICAL HELP OR PARTS - LONG DELAY	 NEED MECHANICAL DO NOT ATTEMPT TO LAND HERE	 Both arms waved across face	 Both arms forward horizontally; square and point in direction of landing. Repeat.	 Make throwing motion	 Cup hands over ears
 NEGATIVE (NO)	 AFFIRMATIVE (YES)	 PICK US UP - PLANE ABANDONED	 AFFIRMATIVE (YES)	 NEGATIVE (NO)	 Fishfall plane	 If you are forced down and are able to attract the attention of the pilot of a reserve airplane, the body signals illustrated can be used to transmit messages to him as he circles over your location. Stand in the open when you make the signals. Be sure that the background, as seen from the air, is not con- fusing. Go through the motions slowly and repeat each signal until you are positive the pilot under- stands you.	INSTRUCTIONS 1 LAY OUT SYMBOLS BY USING STRIPS OF FABRIC OR PARACHUTES, PIECES OF WOOD, STONES, OR ANY AVAILABLE MATERIAL 2 PROVIDE AS MUCH COLOR CONTRAST AS POS- SIBLE BETWEEN MATERIAL USED FOR SYMBOLS AND BACKGROUND AGAINST WHICH SYMBOLS ARE EX- POSED 3 SYMBOLS SHOULD BE AT LEAST 10 FEET HIGH OR LARGER IF POSSIBLE CARE SHOULD BE TAKEN TO LAY OUT SYMBOLS EXACTLY AS SHOWN TO AVOID CONFUSION WITH OTHER SYMBOLS 4 IN ADDITION TO USING SYMBOLS, EVERY EFF- ORT IS TO BE MADE TO ATTRACT ATTENTION BY MEANS OF RADIO, FLARES, SMOKE, OR OTHER AVAIL- ABLE MEANS 5 WHEN GROUND IS COVERED WITH SNOW, SIG- NALS CAN BE MADE BY DRAGGING, SHOVELING OR TRAMPING THE SNOW THE DEPRESSED AREAS FORM- ING THE SYMBOLS WILL APPEAR TO BE BLACK FROM THE AIR 6 PILOT SHOULD ACKNOWLEDGE MESSAGE BY ROCKING WINGS FROM SIDE TO SIDE

HOW TO USE THEM

- 11 AIRCRAFT SERIOUSLY DAMAGED
- 12 PROBABLY SAFE TO LAND HERE

SURVIVAL

1. Immediately after an emergency landing exit the aircraft if at all possible. Check for injuries but only give temporary first aid necessary to permit careful removal of casualties with serious injuries.
2. Stay away from the aircraft, if possible, until engines have cooled and spilled gasoline has evaporated.
3. After occupants are all out and a safe distance from the aircraft re-evaluate injuries and administer first aid as necessary.
4. If the weather is adverse, make or find temporary shelter.
5. Evaluate your location dangers: fire, sliding, rockfall, avalanche, terrain, weather.
6. Stay near the aircraft if at all possible. It contains the basic ingredients for warmth, shelter and signaling materials.
7. Turn on or make sure that your ELT is ON.
8. Signal for help. Do not neglect your aircraft radio. It is possible it may still be operational. Turn on squelch and volume and key the mike. If the results are positive, listen on a local or ATC frequency. When you hear a transmission transmit "MAYDAY - MAYDAY." If you should hear a jet, transmit on 121.5. All airlines, and military aircraft monitor 121.5. If you do not hear any transmissions go ahead and transmit in the blind on these frequencies. Limit your transmissions to about one every fifteen minutes. Transmitting places considerably more drain on the battery than receiving. If both your ELT and radio are working, you will hear the ELT signal when listening on 121.5. It may be necessary to turn the ELT off when transmitting or listening on 121.5. (Don't forget to turn the ELT back on!)
9. If the weather is cold or wet you should not spend too much time trying to signal. Your prime effort must be directed toward conserving the energy you have.
10. Wings, rudder, etc., all may be used to make a shelter. Keep this shelter as small as possible to lessen the area your body must heat. Insulate shelters with boughs, bark, tarps, maps, etc. Use **anything** to keep the rain from getting inside your shelter. Body heat loss is energy loss.
11. Your aircraft can fulfill most of your basic needs if you improvise. Think basic needs: Shelter (cover), warmth (fabric), tools (metal). Maps, newspaper, engine cover, plastic tarps all make excellent emergency bedding.
12. Build a fire, if possible. Don't forget that the aircraft gasoline is a valuable resource in starting a fire when only wet wood is available. Caution must be used when using gasoline. Soak or pour gasoline on the wood but be sure the container is out of reach when igniting the wood. Paper such as charts can also aid in getting a fire started. However, do not burn your charts for firewood. Paper makes an excellent insulation for bedding, clothing and shelter. NOTE: Pre-plan building a fire. Have an adequate amount of wood gathered to keep the fire going for a length of time prior to lighting.
13. In cold weather, insulation and upholstery from the craft make excellent material for overboots sleeping bags, mittens, hats, and ground insulation. Sew them together with salvaged aircraft wire. Put plastic side out for better wetness protection.
14. If running water is not readily available melt snow or ice in

improvised pot, or squeeze dew drops from aircraft surfaces. Place a sheet of plastic flat on the ground so that it may collect dew or condensation. If it is raining, place plastic sheet in ground depression to collect water.

15. Keep your signal fire burning all the time. Smoke and firelight can be seen from great distances. Both air and ground searchers will be looking for them.

16. Aircraft should be made **VISIBLE FROM THE AIR** if possible. Clear brush, cut trees, etc. Be prepared to make signals as aircraft approaches your area. Keep the mirror handy if the sun is shining. Practice its use.

17. Get your emergency signaling devices ready and have signal equipment handy. Every possible effort must be made to attract searchers to your location by signals—mirror, smoke, flares, color panels—and to sustain life and energy until assistance arrives.

18. Colored panels can tell a message. Pile brush in **SOS**. Stamp large, two feet wide letters **SOS** in the snow. Fill stamped marks with boughs or small brush.

19. Clear windows make a fair emergency mirror. **SIGNALS MAKE YOU EFFECTIVELY BIGGER.**

CAUTION

SURVIVAL WILL DEPEND GREATLY UPON YOUR STATE OF MIND. PSYCHOLOGICAL DISCIPLINE IS A MUST. YOU MUST SUSTAIN LIFE UNTIL RESCUED. REMAIN CALM! THINK!

SURVIVAL KIT

Compass

Tool Kit (small, light weight)

First Aid Kit

Food (Freeze Dried,

Candy Bars, Etc.)

Disposable Space Blankets

Saw,

Matches (waterproof) & fire starter

Signaling Device(s)—(Flares,

Mirror, Strobe Light etc.)

Knife

50' 1/8" Nylon Rope

Garbage Sacks

Fish Hooks, sinkers and line

Can Opener, Sierra cup

Seal contents in a container

suitable to heat & store water

winter clothing & sleeping bags (during winter months)

MOUNTAIN FLYING TIPS

GENERAL

1. Make sure that your proficiency level and your aircraft meet the special demands of your planned flight.
2. If you are not sure of your capabilities, take some dual instruction from a flight instructor experienced in mountain flying.
3. Keep your aircraft as light as possible.
4. Be familiar with your planned route of flight and destination airport. Check the field conditions with experienced local pilots. Familiarize yourself in advance with the field length, altitude, and any special approach/departure procedures.
5. Obtain a thorough weather briefing. A forecast of marginal VFR frequently translates to IFR in the mountains.
6. Plan your trip for early morning or evening hours. Turbulence is usually greatest from 10:00 a.m. to 6:00 p.m.
7. Stay out of the mountains if the forecast winds aloft exceed 25 knots below 12,000 MSL. The wind velocity can double in the vicinity of mountain passes and canyons. **NEVER** fly up a blind or narrow canyon.
8. Mountain winds follow contours much like a stream. The air on the lee (downwind) side of a mountain may be extremely turbulent. Fly on the upwind side of a canyon whenever possible.
9. Cross-check your instruments and attitude indicator frequently. Visual horizons in the mountains may be illusory.
10. Maintain your airspeed in downdrafts and don't panic. Remember, downdrafts do not penetrate the ground.
11. Approach ridges at a 45 degree angle. If caught in a downdraft, you can turn away in time. Fly directly away after ridge crossing.
12. Be courteous to those on the ground who are enjoying a wilderness experience. Maintain sufficient altitude.

13. Plan your trip over valleys as much as possible.
14. Carry a good survival kit and familiarize yourself with its use.

LANDINGS

1. Transmit in the blind on **122.9 MHz** at non-unicom airstrips and announce your intentions.
2. Land upstream (uphill) whenever possible, but remember that many mountain airstrips are “one way” only. Remember that wet grass reduces braking action.
3. Control your rate of descent with power. Maintain a stable airspeed (generally the short field approach speed listed in your aircraft operations manual).
4. Before beginning your approach, circle your intended destination to ensure that the field is clear of other aircraft, livestock, wildlife, etc.
5. Abort your approach if the air becomes turbulent on your let-down. Avoid low altitude maneuvering.

TAKE-OFF

1. **Check density altitude!** If take-off performance for your aircraft is questionable, wait until evening or early morning when the air is cool.
2. Remember that tall grass or soft field conditions can add considerably to your take-off distance.
3. Choose a go, no-go point on the runway. If not airborne at that point, abort the take-off and wait for better conditions.
4. Take off downstream (downhill) whenever possible.
